Program Curriculum

Module 1: Introduction to SAP and SAP Basis

- **Overview of SAP and ERP:** Understanding the evolution of SAP, its product suite (e.g., SAP S/4HANA, SAP Business Suite), and the role of ERP in modern businesses.
- **Introduction to SAP Basis:** Defining the SAP Basis consultant role, key responsibilities, and the importance of system administration in the SAP landscape.
- **SAP System Landscapes:** Understanding different system landscape types (e.g., single, two, and three-system landscapes like Development, Quality, and Production) and their purpose in the software lifecycle.

Module 2: SAP System Architecture

- **Three-Tier Architecture:** Detailed study of the SAP system's presentation, application, and database layers.
- **SAP Instances and Services:** Understanding central and dialog instances, and the role of key services like the dispatcher, message server, and gateway.
- **ABAP and Java Stack:** Comparing and contrasting the architecture of the ABAP and Java stacks, including their specific components and administration tools.
- **SAP Kernel:** Defining the SAP kernel, its components, and its role in system operation.

Module 3: Installation and Post-Installation

- **Installation Planning:** System sizing, hardware requirements, OS and database prerequisites, and downloading installation media.
- **Installation Procedure:** Using the Software Provisioning Manager (SWPM) to perform standard, distributed, and high-availability system installations.
- **Post-Installation Activities:** Performing essential post-installation steps such as license installation, setting up system profiles, and configuring the transport management system (TMS).

Module 4: System Administration

- **Client Administration:** Managing clients, including creation, deletion, copying (local and remote), and exporting/importing client data.
- **User and Authorization Management:** Creating and managing user master records and groups. Configuring the authorization system using the profile generator, creating roles, and assigning authorizations.
- **SAP System Lifecycle Management:** Starting and stopping SAP systems, managing operation modes, and configuring system profiles.

Module 5: Transport Management System (TMS)

- **Concepts and Configuration:** Configuring transport routes, transport layers, and the change and transport system (CTS).
- **Managing Change Requests:** Creating, releasing, and importing change requests (workbench and customizing requests) between systems in a landscape.
- **Administration:** Using transaction STMS to monitor and manage transports, including troubleshooting import errors.

Module 6: Monitoring, Tuning, and Troubleshooting

- **System Monitoring:** Using the SAP Management Console (MMC) and transaction codes (e.g., SM50, SM21, AL08) to monitor work processes, system logs, and user sessions.
- **Performance Tuning:** Analyzing system performance using tools like the workload monitor (ST03N) to identify bottlenecks and optimize system parameters.
- **Background Job Management:** Creating, scheduling, and monitoring background jobs (e.g., event-based, time-based) for routine tasks.

Module 7: Update and Patch Management

- **Support Packages and Add-ons:** Applying support packages and add-ons using tools like SPAM/SAINT and the Software Update Manager (SUM).
- **Kernel Upgrades:** Understanding the process for downloading and upgrading the SAP kernel for both ABAP and Java stacks.

Module 8: Database Administration

- **Database Concepts:** Understanding the architecture of the underlying database (e.g., SAP HANA, Oracle, Sybase).
- **Key Administration Tasks:** Performing database backup and recovery strategies, monitoring database health and performance, and performing basic table maintenance.

Module 9: SAP HANA and S/4HANA Basis

- **SAP HANA Fundamentals:** Introduction to in-memory computing, the SAP HANA database architecture, and its key features.
- **HANA Administration:** Using HANA Studio/Cockpit for monitoring, backup and recovery, user and authorization management, and performance optimization.
- **S/4HANA Landscape:** Overview of the S/4HANA landscape and the technical aspects of system conversion or migration.

Module 10: Integration and Advanced Topics

- **RFC and Integration:** Configuring and managing Remote Function Calls (RFC) for communication with other SAP and external systems. Monitoring gateways and understanding ALE/IDoc basics.
- **Security Basics:** Implementing security policies, auditing, and ensuring compliance for the SAP landscape.
- **Cloud Administration:** Overview of managing SAP systems on hyperscalers like AWS, GCP, and Azure, and understanding SAP Fiori administration.

For Whom · Outcomes · Eligibility

For Whom Is This Course?

- ✓ Engineering & Computer Science graduates
- ✓ Software developers & programmers
- ✓ Functional consultants moving to technical
- ✓ BCA / MCA / BSc-IT students
- ✓ Fresh graduates aiming for SAP technical roles
- ✓ Working professionals upskilling in SAP

Program Outcomes

- ✓ Write core & object-oriented ABAP programs confidently
- ✓ Develop with the RESTful Programming Model (RAP)
- ✓ Apply enhancements, BADIs & interface development
- ✓ Build CDS Views, AMDP & ALV reports on S/4HANA
- ✓ Create OData services & custom Fiori apps
- ✓ Become job-ready for SAP ABAP developer roles

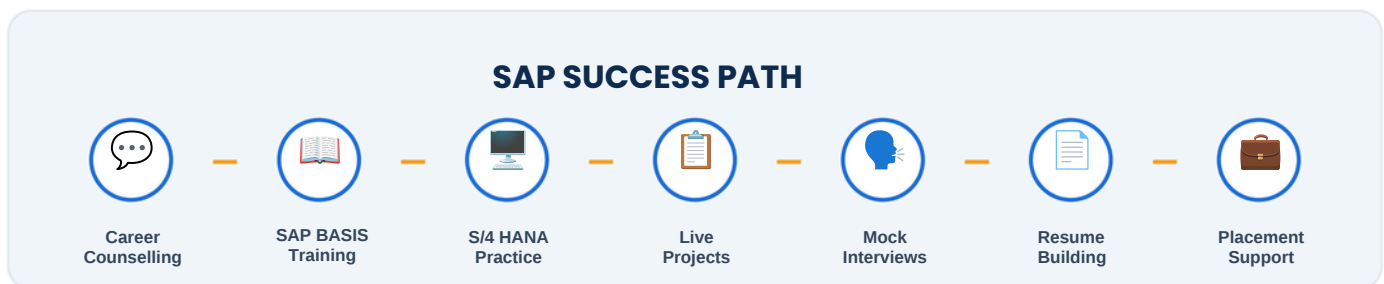

Eligibility Criteria

Any Bachelor's degree (Engineering, Computer Science, IT or Science). Candidates with basic programming logic or any coding background have an advantage, but freshers with a strong interest in SAP development are welcome; prior knowledge is helpful but not mandatory.

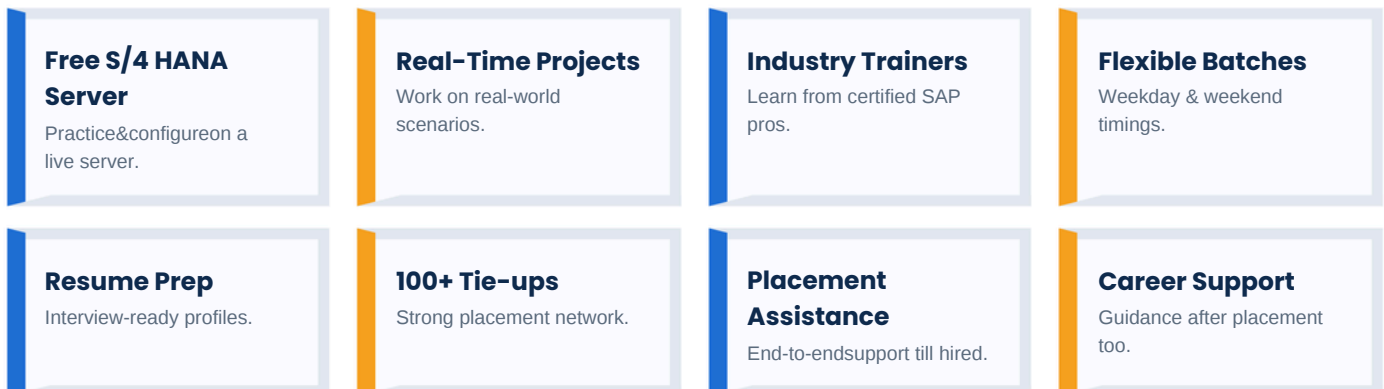

Learner Journey

A simple, guided path from enrolment to placement.

Why Choose DroIT Solutions?

Training Methodology & Certification

Our Training Methodology

KR

Khushi Raygade

16 May 2026

Had a great experience with Placement Assistance and the mentor network. The trainers are knowledgeable, supportive, and always available to solve doubts. The practical SAP training helped me gain confidence for interviews.

SAP FICO Consultant

VP

Varadraj Patil

5 May 2026

Nice guidance and excellent placement support throughout the course. The trainers explained every concept clearly with real-time examples. Special thanks to the entire team for their constant support.

SAP FICO Associate Consultant

RP

Rohit Patil

4 April 2026

One-to-one interaction with mentors made learning very easy. The SAP server access and practical sessions helped me understand real business processes. Highly recommended for SAP aspirants.

SAP FICO Consultant

SD

Snehal Deshmukh

28 March 2026

The curriculum is well structured and focused on industry requirements. Mock interviews, resume preparation, and practical assignments helped me secure my first SAP opportunity.

SAP FICO Analyst

AM

Akash More

22 March 2026

The practical approach of teaching SAP FICO helped me understand concepts much faster. The trainers were patient, supportive, and always ready to clear doubts. Highly recommended for beginners.

SAP FICO Consultant

NK

Neha Kulkarni

15 March 2026

I joined with very little knowledge of SAP, but the structured curriculum and hands-on assignments helped me build confidence. The placement guidance was extremely helpful.

SAP FICO Analyst

PJ

Pratik Joshi

10 March 2026

Excellent training quality and real-time project exposure. The faculty explained every concept with practical business scenarios, making learning easy and interesting.

SAP FICO Consultant

RP

Rutuja Pawar

6 March 2026

The SAP server access and live practice sessions were the biggest advantage of this course. The trainers focused on both technical knowledge and interview preparation.

Finance Associate

SS

Sanket Shinde

1 March 2026

One of the best SAP learning experiences I have had. The mock interviews and resume-building sessions helped me prepare for the recruitment process professionally.

SAP Support Consultant

PP

Priyanka Patil

25 Feb 2026

The trainers have strong industry knowledge and explain topics in a very simple manner. The learning environment is professional and motivating.
